

EGEDAL MILJØ 1 E Litter Bin

EGEDAL MILJØ 1 is a quality litter bin with wood cladding, encouraging everyone to sort their waste when out and about. The bin is modular and installations can be designed to suit specific needs. Robust materials and timeless design make it long-lasting in every sense. It has also been designed so that service staff can empty it without any lifting.

A single row of EGEDAL MILJØ bins can be supplied with openings from one or both sides. The front panel protects the wood around the opening and provides space for waste-sorting pictograms. Modules can be added or removed if recycling needs change. A 2-module set-up can easily become a 3 or 4-module installation, or vice versa. The waste-sorting pictograms can also easily be replaced.

As a result, EGEDAL MILJØ offers great flexibility, as it can be adapted to suit changed legal requirements and varying user needs.

EGEDAL MILJØ 1 is made from hot-dip galvanised steel with FSC®-certified mahogany cladding. The steel components can also be supplied with a powder coating. The bin is high quality and will stand up to wind and weather and the rigours of urban life.

The range has been designed for public spaces, where flexible waste sorting is needed. Both private and public enterprises often need to adapt their waste-sorting facilities on an ongoing basis. EGEDAL MILJØ allows the set-up to be adjusted in the event of changes to user needs, official requirements or other factors.

The EGEDAL range has been designed by Danish design studio VE2 in collaboration with HITSÅ. The aim was to create waste-sorting products that offer a new, high standard of aesthetics.

Materials

Frame: Hot-dip galvanised steel, powder coated hot-dip galvanised steel

Slats: Untreated FSC®-certified mahogany

Dimensions

B: 1260 mm
W: 420mm
H: 900 mm
Weight: 193 kg
