

EGEDAL MILJØ 2 E Litter Bin

EGEDAL MILJØ 2 is a quality litter bin, encouraging everyone to sort their waste when out and about. The bin is modular and installations can be designed to suit specific needs. Robust materials and timeless design make it long-lasting in every sense. It has also been designed so that service staff can empty it without any lifting.

The bin can be set up to form a recycling station with 2, 3 or 4 modules in a single row or 4, 6 or 8 modules in a double row. A single row of EGEDAL MILJØ bins can be supplied with openings from one or both sides. The front panel provides space for waste-sorting pictograms.

Modules can be added or removed if recycling needs change. A 2-module set-up can easily become a 3 or 4-module installation, or vice versa. The waste-sorting pictograms can also easily be replaced.

EGEDAL MILJØ 2 is made from hot-dip galvanised steel. It can be supplied with a plain, hot-dip galvanised finish or with a powder coating in any RAL colour. The top, casing and front panel all allow use of colours to support a particular design concept or communicate waste fractions.

The bin is high quality and will stand up to wind and weather and rigours of urban life.

The range has been designed for public spaces, where flexible waste sorting is needed. Both private and public enterprises often need to adapt their waste-sorting facilities on an ongoing basis. EGEDAL MILJØ allows the set-up to be adjusted in the event of changes to user needs, official requirements or other factors.

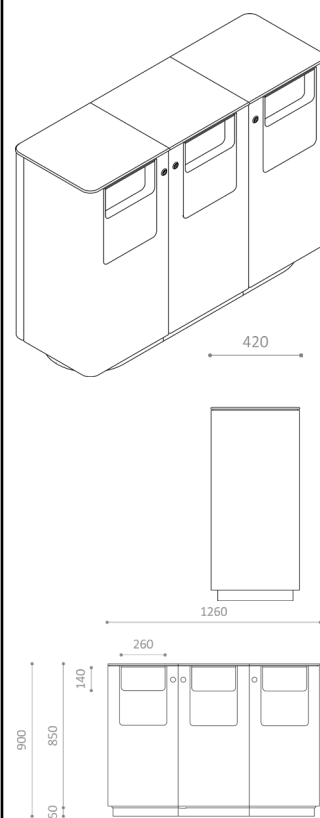

The EGEDAL range has been designed by Danish design studio VE2 in collaboration with HITSÅ. The aim was to create waste-sorting products that offer a new, high standard of aesthetics.

Materials

Hot-dip galvanised steel, powder coated hot-dip galvanised steel

Dimensions

B: 1260 mm
W: 420mm
H: 900 mm
Weight: 193 kg
