THERMO-TREATED PINE WOOD IMPREGNATION

HARDWOOD WITH PIGMENT IMPREGNATION

VARNISHED OKUME PLYWOOD

VARNISHED OKUME

We use various types of wood for our products, including hardwood, thermo-treated pine wood*, and Okumè wood.

The hardwood receives a water-based pigmented impregnation treatment, but it can be left natural upon the customer's request.

Pine wood undergoes heat treatment, enhancing its longevity, weather and decay resistance, solidity, and dimensional stability. It can also be provided with a water-based pigmented impregnation treatment if desired.

Okumè wood products always come with a water-based varnish. Both thermo-treated pine and hardwood can be supplied with an FSC certificate upon request.

*Thermo-treated pine wood may contain larger or smaller knots.

Please note that the images reproduced on these pages are purely indicative.

WPC (Wood Polymer Composite)

WPC PLUS

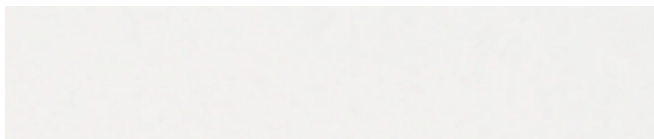

WPC ULTRA

We selected two different types of WPC (Wood Polymer Composite) for our products, ULTRA and PLUS. They do not have to be considered as alternatives, because the choice depends on the technical features of each design

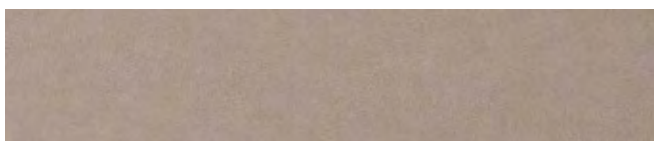

HPL (High Pressure Laminate)

BLACK

WHITE

TAUPE

HPL (High Pressure Laminate) is a material particularly suitable for outdoor use and It is available in three different colors: white, black, and taupe.
