

## R STABIL Litter Bin

R STABIL is a large, wood-clad litter bin ideal for harbour areas, beaches, service areas and any location where you want an attractive, practical and roomy litter bin. R STABIL has a capacity of 105 litres.

It is a sustainable solution with reduced resource consumption incorporated into its design: wooden slats are made from waste wood (FSC®-certified mahogany) from HITSA's production activities.

The steel frame has been optimised to use as little material as possible. This makes R STABIL a product offering low consumption of resources. It is therefore also an economical choice of large litter bin, yet still an attractive solution.

The wood gives R STABIL a warm, natural look, which is also fitting for maritime settings.

The frame is hot-dip galvanised steel, while the lid is aluminium. The metal components can also be powder-coated in any RAL colour. This enables R STABIL to be matched with the design concept of a particular school, churchyard or municipality.

The hatch is left-hinged and has a back plate that supports the filled bag. The new bag is attached to pegs on the bag ring. The hatch opens with a triangular key and locks automatically when closed.

It can be used for waste sorting, with several installed side by side. We can supply R STABIL with waste-sorting pictograms from the Danish Waste Association, if required (available in Danish, English and German).

R STABIL gives you a classic waste container produced with a focus on sustainability and resources.

### Materials

Frame: Hot-dip galvanised steel, Corten steel

Seat: Untreated FSC®-certified mahogany

### Dimensions

Dia: 1800 mm  
H: 445 mm  
Weight: 204 kg
