

## STONE VR Seat

Free-form multipurpose seats, available in 3 sizes, produced in thick fibreglass. 5mm with threaded bushings at the base for attaching feet or threaded rods.

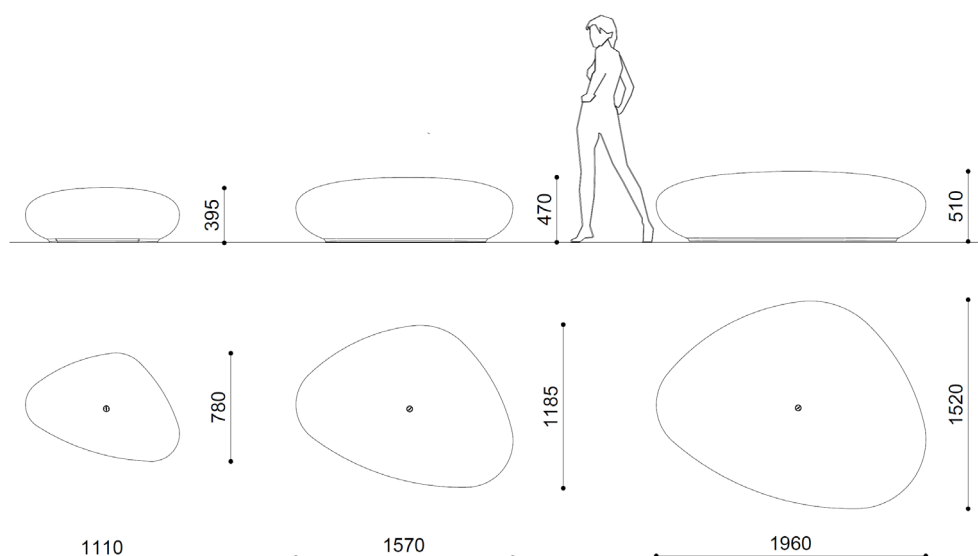

The structure is first treated with an epoxy primer, and then finished with a polyurethane paint with a color chosen from the Metalco RAL range (excluding corten colour). They cannot be supplied with anti-graffiti treatment.

They were created for indoor use and for all those situations in which it is not possible to transport and position HPC products given their weight; they are easily transportable by hand by 2 people even in the L version.

Even though they are light, they are able to resist a static weight of up to 460 kg.

### Materials

Fibreglass, free standing with pedestals or installation with threaded rods

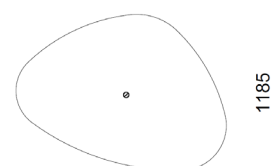

### Dimensions

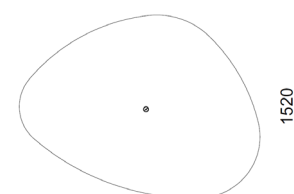

B: 1100mm  
1570-1960mm  
W: 780-1185mm  
1860 mm
