

## TERÄS SK Stool

A small, colourful seat for any location where you want to create a homely atmosphere featuring stylish, Nordic furniture.

The stool is 45 cm high and suitable as seating for the TERÄS table together with the TERÄS chair. It can also be used as a small side table for the TERÄS lounge chair.

The entire TERÄS range, created by Danish design studio VE2, is sturdy and durable for both indoor and outdoor use. The materials and design of the range make the furniture suitable for frequent use in all kinds of settings, and maintenance is easy.

The design of TERÄS lends itself to bright colours. This makes the TERÄS stool ideal for schools, institutions and any setting with people coming and going. It is also possible to choose colours to reflect the particular ambience of restaurants, cafés, museums and other businesses. The metal furniture of the TERÄS range is available in any RAL colour.

The steel components of TERÄS are always hot-dip galvanised before being powder-coated. This provides double protection against rust.
