

Sedis Seat

The Sedis Seat gives the choice of either sitting or leaning, on both sides and at two different heights, giving it various different uses. The seat and backrest are adorned with thick timber slats treated with a water varnish. Each slat is independent, therefore each one is individually replaceable. Each slat has a different shape according to its position on the seat or backrest. The aluminium supports are sandblasted and polyester powder coated, where possible they are buried in the ground to give nimbleness to the structure. Alternatively, they can be fixed externally through a base plate with four holes to fix to the ground with bolts.

Specification:

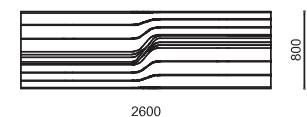

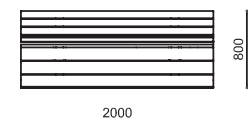

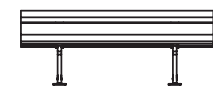

Materials:

Frame - powder coated aluminium

Seat - timber

Dimensions

H: 774mm
W: 2000mm
D: 800mm
