

STRATA Beam Bench

The STRATA Beam Bench marries Meldstone technology with timber in a stylish variation on the concrete and timber classic. Cast concrete anchoring elements are bridged by timber seat slats to form an uninterrupted span. End pieces are subtly faceted which provide a pleasing play between light and shadow. The timber seat offers warmth and softness where the body interacts with the material. Optional arms are available. STRATA Beam is solidly grounded while retaining a lightness of scale which is appropriate for use in multiple applications. A natural complement to the original STRATA bench, it is designed for use with STRATA tables to create comfortable outdoor settings with a decided design edge.

Specification

Materials

Frame - cast concrete
Seat - timber

Dimensions

H: 433mm
W: 780 / 1747 / 2025mm
D: 535mm
